

A Few Random Thoughts You Might Like

- Antivirus software doesn't always find malware because the software expects malware to "look" a certain way. Think of it as a not-so-harmless game of hide and seek.
- Real example: We created a test malware and ran it against 26 of the leading antivirus providers. Only 14 of the 26 providers detected the virus!
- Keeping virus definitions current on every device is time-consuming and error-prone. Critical updates can easily be delayed or missed entirely. When time is an important factor in protecting against the latest malware, a company-wide, real-time update solution is the perfect alternative.
- Our **Webwizely** real-time cybersecurity solution provides an automated, centralized malware and threat detection delivery. Your company is free to focus on the important day-to-day activities. We do the tedious monitoring and remediation for you.
- A company-wide website access policy is just smart business. So much can go wrong when employees visit inappropriate sites. Webwizely's automated solution easily manages this for you.
